* What is a machine activation?

ShareGate Migrate Essentials, Pro or Enterprise enable one or multiple machine activations. A machine activation represents one (1) use of the license key by one (1) user to access the downloadable migration tool on a specific workstation. This means that, you can have up to 1, 5, or 25 active users or workstations using ShareGate Migrate to enable concurrent migrations. Keep in mind that 5 machine activations does not have to have 5 users. You can have one person orchestrating 5 machines.
