

CONTRACTOR HSE INDUCTION SOLUTION

Technologies used:

SharePoint Online, Microsoft Lists, Power Apps,
and Power Automate

Anwyl Group, Project Manager

Adepteq delivered an excellent solution for our HSE Registration system. The custom SharePoint webpart they developed has streamlined the onboarding process for our external contractors, ensuring compliance with our health and safety standards. The system is intuitive and professional—contractors can now register, watch essential safety videos, and complete a short quiz to confirm their understanding, all in one place.

The Problem

Discover how Anwyl, the industry-leading construction company, revolutionised its Health, Safety, and Environment (HSE) processes, streamlining operations and enhancing productivity.

In their pursuit of excellence, Anwyl recognised the need for a more efficient approach to managing HSE procedures and documentation. With numerous contractors involved in the construction of their new properties, it was crucial to ensure that each contractor underwent a rigorous HSE procedure before commencing work on-site.

Previously, this process was manually handled by the site manager, resulting in significant time consumption and excessive paperwork. The site manager, already burdened with numerous responsibilities, needed a solution that would alleviate this administrative burden and allow them to focus on other critical tasks.

The Solution

The HSE Registration system for external contractors consists of a custom SharePoint Framework webpart, written by Adepteq, which reads and writes data to SharePoint lists on the Supply Chain site.

The webpart is designed to capture a contractor's personal information, and upon completion of the registration form section, several video files are played in sequence. These video files inform the contractor of their health and safety obligations when working on an Anwyl Construction site.

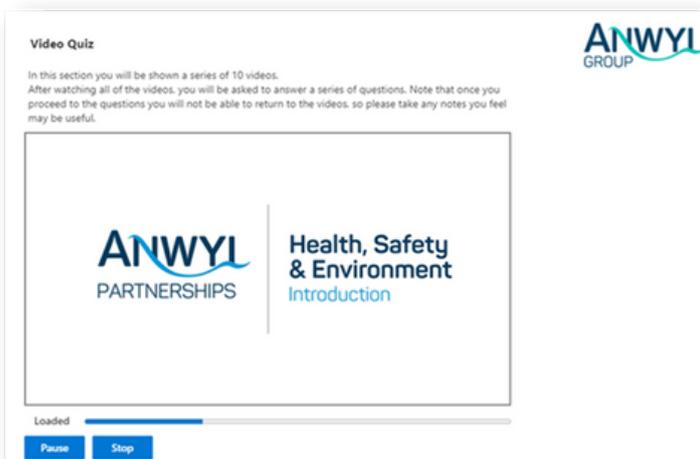

After the video files have been played, the contractor will be presented with multiple choice questions to determine whether they have understood the information presented to them. Successfully completing the questions will provide the contractor with a unique identifier which must be presented when attending a site.

Business Benefits

1. The HSE App streamlines the contractor onboarding process, eliminating the need for manual paperwork and reducing administrative burdens. This efficiency improvement allows site managers to focus on other critical tasks, ultimately increasing overall productivity.

2. The App ensures that contractors undergo a standardised and thorough HSE procedure, promoting strict adherence to safety regulations and industry best practices. This not only minimises the risk of accidents and incidents but also demonstrates a commitment to compliance, protecting the company's reputation.

3. A central repository for all HSE-related documentation, eliminating the hassle of managing physical paperwork, reducing the risk of document loss or misplacement, and enables easy access to critical information when needed. It also simplifies audits and inspections by providing organised and readily available documentation.

A screenshot of a web-based "Site Induction Registration Form" from ANWYL GROUP. The form is titled "Site Induction Registration Form" and includes a search bar at the top right. The form fields are: "First Name *", "Last Name *", "Age *", "Profession / Trade *", "Years Served in Industry *", "Months Served in Industry *", "Company employed by *", "Address *", "Emergency Contact Name *", "Emergency Contact Number *", and "Do You Have a CSCS/CPCS/Trade card?". There is a "Select Image" button for uploading a CSCS Card Front. A note at the bottom states: "Note: We do not accept the CSCS health & safety certificate if it is more than 6 months old".

4. Implementing the App demonstrates a commitment to safety and compliance. Clients and stakeholders are more likely to trust companies with robust HSE systems, leading to increased opportunities for business growth.
